PORTAPEZZI MODULARI PER CENTRI DI LAVORO ORIZZONTALI

HORIZONTAL MACHINING CENTRES MODULAR TOMBSTONES

A supporto ed integrazione dei sistemi di bloccaggio la **GERARDI** ha progettato e via via sviluppato una gamma di portapezzi in fusioni **monoblocco di ghisa G30** (con pareti spessore 43-45mm circa e con doppio trattamento di distensione e stabilizzazione) e recentemente anche di **alluminio speciale ad alta resistenza**. Tali prodotti possono essere forniti nelle forme di: **Cubi, Spalle, Squadre, Piastre, Mensole e speciali a richiesta**.

Come **lavorazioni e finiture** vengono proposte le seguenti:

- **Versione A** - **Fusioni monoblocco - Sgrossati di fresa**
- **Versione B** - **Fusioni sgrassate con sovrametallo e base finita**
- **Versione C** - **Completamente finiti. Tolleranza entro $\pm 0,02$ mm**
- **Versione E** - **Con reticolo di fori calibrati e filetti interni integrali**
- **Versione F** - **Con reticolo di bussole temprate 100Cr6 e filetti riportati in acciaio inox**

L'importanza sempre maggiore di questi prodotti deriva dallo sviluppo e diffusione di centri di lavoro orizzontali e sistemi pallettizzati che richiedono appunto tali strutture di supporto per le attrezzature o per i pezzi da lavorare stessi. I controlli vengono eseguiti con macchine tridimensionali su ogni pezzo eseguito. Soluzioni speciali e personalizzate integrate con sistemi di bloccaggio adeguati possono essere studiate e realizzate su richiesta per sfruttare al meglio il campo di lavoro e le capacità delle macchine.

To support and complete the **Gerardi Modular Workholding System** a more and more strategic and important role is played by all the range of modular tombstones and sub-plates. They are manufactured in the most different shapes and versions, anyway always provided in one **solid cast iron cast G30** with walls about 40 mm thickness and with double stress relieving heat treatment. Recently in **high resistance aluminum**. The shapes available are: **Cubes, Two side tombstone, Angles, Plates and subplates, Shelves and special on specific request**.

As **finishing** following are available:

- **A type** - **One solid cast iron. Rough milled**
- **B type** - **Rough milled casting with overall material and base finished**
- **C type** - **Completely finished with tolerance of $\pm 0,02$ mm**
- **E type** - **Grid tombstone with calibrated holes and solid threads**
- **F type** - **Grid tombstone with hardened bushings 100 Cr6 and inox steel helicoils**

The greater importance of such products originates from the development and widespread of Horizontal machining centres and multipallet systems which require just such structures to support the fixtures or work-pieces. The checking is carried out piece by piece on a 3-dimensional machine. Specific or tailor-made tombstones complete with clamping systems applications could be studied and manufactured on request in order to better exploit the machines runs and capacity.

SUGGESTIONS HOW TO MACHINE TOMBSTONES WITH ZERO POINT

Tutti i ns. portapezzi (escluso la fusione grezza), sono predisposti, sulla base di appoggio con forature e filettature per l'uso dei tiranti Zero-Point Art.11A T.2. Questo principalmente significa che tutti i ns. portapezzi possono essere velocemente fissati, posizionati e lavorati sulle 5 facce senza nessun impedimento per quanto riguarda il percorso utensili.

All our tombstone fixture (rough cast iron casting excluded) are pre-worked and prepared on the bottom base face for our Zero-Point pull-stud Art.11A T.2. This important feature will give you many possible application.
